

Knowledge and Language: Lingua Franca

Lesson 2: Fact-Finding Task

Focus: *Does the dominance of a language shape what is visible and valued on the internet?*

Objectives	<ul style="list-style-type: none">• Investigate real-world case studies that illustrate how language impacts the visibility, credibility, and accessibility of knowledge online.• Substantiate or challenge the claims from Lesson 1 using evidence from media articles, video interviews, and platform case examples.• Develop critical thinking and source evaluation skills by connecting practical examples to abstract knowledge questions.
Homework Preparation Task	<p>Case Study Task</p> <ul style="list-style-type: none">• Discussion Prompt: <i>Does the dominance of a language shape what is visible and valued on the internet?</i>• Divide students into small groups and assign each group a case study related to the topic. Suggestions are listed below. Students will add their evidence to the Kialo discussion from Lesson 1. <p>Each group will:</p> <ul style="list-style-type: none">• Reflect on how these cases connect to the concepts discussed in Lesson 1.• Explore their assigned case using the provided resource and their own research.• Prepare a short presentation (5–10 mins) responding to the following question:<ul style="list-style-type: none">◦ How does language affect visibility, credibility, or accessibility of knowledge in this case?• Students should include details of:<ul style="list-style-type: none">◦ What happened in the case.◦ How language influenced what knowledge was visible or valued.◦ Which TOK concept (power, culture, or perspective) is most relevant.◦ Whether the case supports or challenges a claim from Lesson 1. <p>Case Study Options</p> <ol style="list-style-type: none">1. Wikipedia’s Language Divide<ul style="list-style-type: none">• Focus: The manipulation of smaller Wikipedia editions.• Task: Examine how language communities shape the knowledge that is presented and trusted.• Resource: Undark: Wikipedia Has a Language Problem. Here’s How to Fix It2. Latin America – Invisible Science in Global Media<ul style="list-style-type: none">• Focus: The underrepresentation of Latin American scientists in English-speaking media.• Task: Examine why knowledge produced in non-dominant languages is often undervalued or unseen globally.• Resource: The Open Notebook: Invisible Science – Why Are Latin American Science Stories Absent in European and U.S. Media?3. Facebook Mistranslation and Content Moderation<ul style="list-style-type: none">• Focus: The impact of translation systems and moderation policies on the transfer of knowledge.• Task: Examine the impact of automated systems and bias policies on the understanding of cultural and linguistic nuance.• Resource: The Guardian: Facebook Translation Fail Leads to Arrest4. Language Infrastructures and the Future of the Internet<ul style="list-style-type: none">• Focus: The way language influences not just content, but the systems that build and deliver knowledge online.• Task: Examine the potential impact of linguistic “bubbles” online.• Resource: YouTube: Will technology end the English Language’s global domination?

Activities	<ol style="list-style-type: none"> 1. Introduction (5 mins) <ul style="list-style-type: none"> ● Recap Lesson 1: <ul style="list-style-type: none"> ○ Review key arguments from the previous debate on the guiding question: “<i>Does the dominance of a language shape what is visible and valued on the internet?</i>” ● Quick group reflection: <ul style="list-style-type: none"> ○ What claims did you find most convincing or most problematic in last class’s debate? ○ Were there any claims that felt hard to prove or lacked real-world examples? ● Present the task’s central question: <ul style="list-style-type: none"> ○ Does the dominance of a language shape what is visible and valued on the internet? ● The emphasis is on applying power, culture, and perspective to evaluate how language shapes digital knowledge. 2. Bridge to Lesson 2 <ul style="list-style-type: none"> ● Explain that students will now investigate how real-world language practices, policies, and technologies (e.g., translation tools, media coverage, platform design) influence what becomes visible or credible online. ● Clarify that the goal is to move from opinion to evidence. These case studies are not about language in theory — they’re about who gets heard, trusted, or erased online because of language. 3. Presentations (30 mins) <ul style="list-style-type: none"> ● Students present their case studies to the class. ● Students should take note of any useful points from other groups’ presentations to use in the Kialo discussion. 4. Recording Findings in a Kialo Discussion (20 mins) <ul style="list-style-type: none"> ● Students return to the Kialo discussion from Lesson 1 and: <ul style="list-style-type: none"> ○ Add at least one new claim or counterclaim based on their case study. ○ Reply to at least one peer’s argument, using insights from another group’s case. ○ Label their post with the relevant TOK concept (e.g., perspective — Arabic content suppression). ● Focus areas for Kialo updates: <ul style="list-style-type: none"> ○ Digital gatekeeping: Who controls which languages/platforms dominate? ○ Cultural framing: How do translation and language communities shape meaning? ○ Linguistic inequality: Are all languages and their speakers equally represented or trusted online?
Reflection Questions	<p>Reflection (10 mins): Discuss the following reflection questions in open discussion or exit ticket format:</p> <ul style="list-style-type: none"> ● How did the case studies challenge or deepen your understanding of how language influences what we see, trust, or ignore online? ● Whose knowledge or perspective was missing, silenced, or distorted in the examples you explored — and why might that matter? ● Can knowledge truly be global if it’s shaped by a few dominant languages? What are the consequences for those outside that linguistic majority? ● How do language, culture, and power interact to determine which knowledge is made visible and which is hidden on the internet? ● What responsibilities do we have — as students, creators, or consumers of knowledge — to engage with linguistic diversity in digital spaces?
Resources	<ul style="list-style-type: none"> ● Lesson Slides ● Kialo Discussion: Does the dominance of a language shape what is visible and valued on the internet?

TOK Concepts	<ul style="list-style-type: none"> ● Power: To what extent does language determine who has the authority to create and disseminate knowledge in digital spaces? ● Culture: How does the cultural context embedded in language influence the way knowledge is understood and communicated? ● Perspective: In what ways do different languages shape distinct versions of reality, and how does this affect our understanding of truth?
Critical Thinking Concepts	<ul style="list-style-type: none"> ● Confronting Biases and Assumptions: <ul style="list-style-type: none"> ○ Challenging Linguistic Neutrality: Questioning the assumption that digital platforms or knowledge systems treat all languages equally. ○ Identifying Hidden Power Structures: Recognizing how language dominance can reflect geopolitical, economic, or institutional power. ● Exploring Contexts: <ul style="list-style-type: none"> ○ Case-Specific Inquiry: Understanding how each case study reveals different relationships between language, knowledge, and power. ○ Cultural Sensitivity: Examining how translation, moderation, and platform design reflect or erase cultural perspectives. ● Responsiveness and Flexibility of Thought: <ul style="list-style-type: none"> ○ Adapting Claims with Evidence: Revising or strengthening arguments based on real-world examples and counterexamples. ○ Balancing Contradictions: Navigating how language can both expand access and create silos, depending on the context.
